

Salesforce Capabilities

SALESFORCE TECHNOLOGY CAPABILITIES AND DEPLOYMENT STANDARDS

SALESFORCE PARTNER STATUS AND CREDENTIALS

SUMMIT PARTNER TIER

Gauri is a UK-based Salesforce Summit Partner, the highest tier in Salesforce's consulting partner programme. This tier designation reflects:

- Sustained delivery volume across multiple engagements
- Certification depth with multiple certified architects and administrators
- Proven track record delivering solutions from small business implementations to large-scale enterprise deployments
- Commitment to ongoing partner enablement and training

CERTIFIED RESOURCES

- Salesforce Technical Architects (multiple)
- Salesforce Business Analysts (certified)
- Salesforce Administrators (certified)
- Salesforce Developers (certified)
- Agentforce Specialisation (emerging practice)

COMPETITIVE POSITIONING

Rather than positioning as a generic CRM implementer, Gauri highlights Agentforce and Einstein as the two Salesforce capability areas most closely tied to its "AI-ready" positioning. Emphasises extending Salesforce beyond system of record into system of action.

SALESFORCE AGENTFORCE: AUTONOMOUS AI AGENTS

STRATEGIC POSITIONING

Salesforce Agentforce is Salesforce's agentic AI layer that allows autonomous or semi-autonomous AI agents to take action inside CRM workflows. Central to how Gauri helps clients extend Salesforce beyond passive record-keeping into active process execution.

TECHNICAL ARCHITECTURE

Agent Framework: Autonomous or semi-autonomous agents making decisions and taking actions within Salesforce

Workflow Integration: Agents embedded in case management, lead qualification, opportunity management workflows

Decision Logic: Rules, conditions, and AI models determining agent actions

Escalation Pathways: Human handoff for decisions outside agent confidence thresholds

Action Types: Record creation/updates, notifications, external system calls, approval routing

REPRESENTATIVE USE CASES

Case Triage and Routing: Autonomous agents categorising inbound support cases and routing to correct team

Lead Qualification: AI agents scoring and qualifying leads based on firmographic and behavioural data

Service Booking: Automation of routine service-booking enquiries (e.g., Kestrel Automotive Group pilot)

Opportunity Qualification: AI-assisted opportunity scoring and sales process acceleration

Approval Workflows: Autonomous approval for routine requests within defined thresholds

Customer Service Response: Initial response handling for predictable inquiry categories

KESTREL AUTOMOTIVE GROUP CASE STUDY

Agentforce pilot deployed for routine service-booking enquiries

Results: Meaningful share of routine enquiries resolved without human intervention

Scaling Opportunity: Freed up support team capacity for complex issues

Pattern: Autonomous handling of high-volume, low-complexity service interactions

IMPLEMENTATION APPROACH

Agent Design Workshop: Identifying high-volume, low-complexity processes suitable for automation

Training Data Gathering: Historical case/lead data for model training and testing

Testing Framework: Sandbox testing with shadow runs before production deployment

Escalation Tuning: Configuring thresholds at which agents hand off to humans

Post-Launch Monitoring: Tracking agent accuracy, escalation rates, and business impact

Continuous Refinement: Periodic retraining with new data and process changes

GOVERNANCE AND RISK MANAGEMENT

Confidence Threshold Configuration: Setting minimum certainty levels before autonomous action

Audit Trails: Complete logging of agent decisions and actions for compliance

Human Oversight: Designated review of autonomous decisions for sensitive categories

Rate Limiting: Throttles to prevent runaway automated actions

Rollback Capability: Ability to revert autonomous agent decisions and return to manual processing

SALESFORCE EINSTEIN: PREDICTIVE AND GENERATIVE AI

EINSTEIN POSITIONING

Salesforce's longer-standing predictive and generative AI toolset embedded across Sales, Service, and Marketing Cloud.

Complementary to Agentforce but focused on insight and guidance rather than autonomous action.

EINSTEIN SALES CAPABILITIES

Sales Insights: AI-generated analysis of sales activity, deal momentum, and customer engagement patterns

Lead Scoring: Predictive lead scoring identifying high-probability opportunities based on historical pipeline data

Opportunity Insights: Automated identification of stalled deals and at-risk accounts requiring intervention

Next Best Action: Recommendations for follow-up actions based on customer engagement history

Activity Capture: Automatic logging of email, calendar, and call data without manual data entry

Deal Guidance: Contextual recommendations aligned to sales process stage

EINSTEIN SERVICE CAPABILITIES

Email Generation: AI-assisted drafting of customer service responses

Case Summarisation: Automatic case summary generation from conversation history

Suggested Responses: Templated or AI-generated response suggestions based on case category

Knowledge Article Recommendation: Automatic linking of relevant knowledge base articles to cases

Sentiment Analysis: Customer emotion detection from case notes and communications

EINSTEIN MARKETING CAPABILITIES

Campaign Analytics: Predictive analysis of campaign performance and ROI

Audience Segmentation: AI-driven customer segmentation for targeting

Email Optimisation: Subject line and send-time optimisation

Journey Orchestration: Predictive timing and channel recommendations for customer journeys

IMPLEMENTATION APPROACH

Baseline Metrics: Establishing current performance (close rates, sales cycle length, service response time)

Data Preparation: Ensuring high-quality historical data for model training

Pilot Program: Rolling out Einstein capabilities to limited user group with close monitoring

User Adoption Support: Training sales and service teams to interpret and act on AI recommendations

Feedback Loop: Continuous monitoring of model accuracy and retraining cycles

Advanced Customisation: Building custom models for company-specific processes where needed

SALESFORCE SALES CLOUD: CUSTOMER-CENTRIC SALES OPERATIONS

PLATFORM OVERVIEW

Salesforce Sales Cloud is the CRM foundation for managing opportunities, accounts, leads, and the complete sales process. Gauri's implementations emphasise alignment with customer-centric business processes rather than process-centric system configuration.

CORE FUNCTIONALITY

Account and Contact Management: Master customer database with hierarchical account structures, contact roles, and engagement history

Lead Management: Lead capture, scoring, assignment, and nurture workflows

Opportunity Management: Pipeline visibility with sales stage tracking, forecast accuracy, and deal management

Quote and Order Management: Quote generation, approval workflows, and order capture

Sales Process Automation: Workflow rules and automation triggering actions based on sales stage changes

Territory and Quota Management: Sales hierarchy, territory assignment, and quota tracking

Forecasting: Opportunity-based and metric-based forecast rollups with sales leader visibility

REPRESENTATIVE IMPLEMENTATION SCOPE

1. Sales Process Design aligned to Salesforce

- Sales stage definition (Prospect, Qualified Lead, Demo/Trial, Proposal, Negotiation, Closed/Won, Closed/Lost)
- Entry criteria and exit criteria for each stage
- Activities required at each stage (calls, meetings, emails, proposals)
- Forecast category assignment for revenue prediction
- Milestone and success criteria definition

2. Lead Management Workflow

- Lead capture channels (web forms, events, partner referrals, advertising)
- Lead assignment and round-robin distribution
- Lead scoring model calibration (fit, engagement)
- Lead qualification criteria and lead-to-opportunity conversion
- Lead source and campaign tracking

3. Opportunity Tracking and Pipeline Management

- Opportunity creation and account linking
- Deal size and duration projections
- Probability weighting for each sales stage
- Account growth and cross-sell identification
- Lost opportunity analysis for process improvement

4. Sales Effectiveness Enablement

- Sales collateral management and e-signature integration
- Guided selling through page layouts and lightning apps
- Mobile access for on-site customer engagement
- Real-time sales intelligence from Einstein
- Sales dashboard and activity tracking

5. Revenue Forecasting and Reporting

- Forecast category setup (Committed, Best Case, Pipeline)
- Sales leader dashboard with team and territory performance
- Individual contributor activity metrics (calls, meetings, emails)
- Win/loss analysis and sales cycle benchmarking
- Campaign source tracking and ROI analysis

GROUPE ATLANTIC CASE STUDY

Multi-channel Salesforce implementation across UK, ROI, and US divisions

Integration with SAP, Talend, and Field Service technologies

Results: Integration "fired up growth" with CIO citing Gauri's cross-platform expertise

Outcome: Unified customer view across geographies enabling account expansion

SALESFORCE SERVICE CLOUD: CUSTOMER SUCCESS AND SUPPORT

SERVICE CLOUD FOUNDATION

Salesforce Service Cloud manages the complete customer service lifecycle from case creation through resolution, with emphasis on first-contact resolution and customer satisfaction.

CORE CAPABILITIES

Case Management: Ticket creation, assignment, escalation, and closure tracking

Multi-Channel Support: Web, email, phone, social media, and chat integration

Knowledge Management: Self-service knowledge base reducing support volume

Community Portal: Customer self-service community and peer-to-peer support

Field Service Lightning: Mobile workforce management and scheduling (separate section below)

Service Level Agreements: Automatic escalation and tracking against SLAs

Customer Portal: Customer access to case status and knowledge articles

REPRESENTATIVE IMPLEMENTATION SCOPE

1. Case Management Process Design

- Case types and categories (Technical Issue, Billing, Feature Request, General Enquiry)
- Routing logic by case type, severity, and customer priority
- Auto-response templates for common queries
- Case closure criteria and quality checks
- Post-resolution customer feedback and NPS tracking

2. Knowledge Management System

- Knowledge article structure and templates
- Category taxonomy and search optimisation
- Article linking to case types and AI recommendations
- Author roles and approval workflows
- Regular review and content retirement process

3. Support Portal Configuration

- Customer self-service access to account, cases, and orders
- Community forum for peer-to-peer problem solving
- Knowledge article browsing and search
- Case submission and status tracking
- Customer feedback and satisfaction surveys

4. Service Level Agreement Configuration

- Response time targets by case severity (P1-P4)
- Escalation workflows when SLAs breach
- Management dashboards for SLA compliance
- Reporting on SLA performance by agent and queue

5. AI-Assisted Service Delivery

- Einstein service recommendations
- Suggested email responses and case summarisation
- Email and chat case logging automation
- Knowledge article recommendations at case creation

KESTREL AUTOMOTIVE GROUP CASE STUDY

Salesforce Service Cloud for unified service scheduling across 14 dealership sites

Field Service Lightning deployment for mobile technician scheduling and warranty claims

Results: Warranty claim processing time more than halved, lead response time under 2 hours

SALESFORCE FIELD SERVICE LIGHTNING: MOBILE WORKFORCE MANAGEMENT

POSITIONING

Dedicated capability for field-based workforces including technicians, engineers, installers, and service representatives.

Provides mobile scheduling, dispatch, completion tracking, and customer communication.

CORE COMPONENTS

Workforce Scheduling: Optimised scheduling balancing technician availability with job priorities

Dispatch Management: Mobile-first job assignment and real-time changes

Route Optimisation: Intelligent routing reducing travel time and fuel costs

Mobile App: Technician access to job details, customer information, and completion workflows

Time and Expense Tracking: Automated capturing of work hours and travel

Asset Tracking: Location-based tracking of technicians and service vehicles

Completion Workflows: Digital work order completion with signatures and photos

Inventory Management: Field inventory tracking and parts availability

REPRESENTATIVE USE CASES

Service Technician Dispatch: Field service technicians receiving jobs, navigating to customer sites, and completing work

Maintenance and Installation: Engineers managing scheduled maintenance visits and new installations

Field Sales: Sales representatives accessing customer information and completing contracts in the field

Warranty Administration: Service claims processing with photo and documentation capture

KESTREL AUTOMOTIVE GROUP IMPLEMENTATION

14 dealership sites consolidated onto single Service Cloud instance

Field Service Lightning for mobile technician scheduling and warranty claims

Results: Warranty claim processing streamlined, field visibility improved, customer response time enhanced

HARLOW & VANCE HOME CASE STUDY

Multi-channel retailer implementing Field Service for in-home service and installation coordination

Integration with SAP inventory system for parts availability visibility

Results: Field technician efficiency improved, customer satisfaction enhanced through real-time communication

SALESFORCE-SAP INTEGRATION: UNIFIED CUSTOMER-TO-CASH

INTEGRATION ARCHITECTURE

Gauri specialises in deeply integrated Salesforce-SAP implementations where CRM and ERP systems share master data and process workflows rather than operating independently.

TYPICAL INTEGRATION PATTERNS

1. Customer Master Synchronisation

- Single customer record managed in SAP (ERP system of record)
- Real-time or near-real-time synchronisation to Salesforce
- Account hierarchy and customer classification consistency
- Tax ID, credit terms, and billing information alignment
- Conflict resolution when both systems update customer records

2. Order-to-Cash Integration

- Salesforce quote generation from SAP product and pricing master
- Sales order creation in SAP from Salesforce opportunities
- Inventory availability validation in real-time during quote
- Order confirmation and status updates flowing back to Salesforce
- Billing and revenue recognition in SAP, visibility in Salesforce

3. Product and Pricing Master Synchronisation

- SAP product master pushed to Salesforce (descriptions, specifications, pricing)
- Regular updates reflecting SAP changes (discounts, promotions, availability)
- Sales configuration guided by SAP-managed rules and constraints
- Pricing logic aligned between systems (list price, discounts, terms)

4. Revenue and Pipeline Visibility

- SAP financial results reconciled to Salesforce pipeline forecasts
- Actual revenue backfilled into closed-won opportunities

- Deal-level profitability analysis combining SAP cost and Salesforce revenue
- Pipeline velocity and sales cycle analysis feeding into SAP demand planning

INTEGRATION TOOLING

Talend: ETL/ELT platform used alongside Salesforce and SAP for data movement and transformation

MuleSoft: API-based integration for real-time synchronisation (where appropriate)

SAP Integration Suite: BTP-based integration capabilities for native SAP cloud connectivity

Salesforce Connect: External objects for real-time SAP data access without duplication

GROUPE ATLANTIC CASE STUDY

Salesforce integration across UK, ROI (Republic of Ireland), and US divisions

Integration with SAP, Talend, and Field Service components

Results: Unified customer view across geographies, growth acceleration, timeline and budget achievement

SALESFORCE IMPLEMENTATION BEST PRACTICES

ADOPTION AND CHANGE MANAGEMENT

Gauri positions adoption and change management as distinct workstreams alongside technical implementation. QubePay (payment services company) case study references "enabling optimised and improved Salesforce adoption" as explicit deliverable.

Key Practices:

- Executive sponsorship and leadership alignment
- User role definition and super-user identification
- Change management communications plan
- Training delivery targeted to user roles and responsibilities
- Adoption metrics and feedback loops
- Post-go-live reinforcement and support

CONFIGURATION PATTERNS

- Lightning Experience standard (not legacy Salesforce Classic)
- Page layout and field-level security aligned to roles
- Workflow automation and process builder for process enforcement
- Flow (cloud flows) for complex, multi-step processes
- Lightning apps for role-specific experiences

SECURITY AND DATA GOVERNANCE

- Role-based access control with sharing rules
- Field-level encryption for sensitive data
- Data classification and retention policies
- Audit trail configuration for compliance
- Platform event for secure inter-system messaging

PERFORMANCE AND SCALABILITY

- Governor limits awareness for custom development
- Asynchronous processing for bulk operations
- Batch Apex for data-intensive jobs
- SOQL query optimisation for reporting performance
- Caching strategies for frequently accessed data
