

Support Standards

GAURI CUSTOMER SUPPORT AND OPERATIONS STANDARDS

CUSTOMER ONBOARDING PROCESS

PURPOSE AND SCOPE

Goal: Bring new client from signed contract to live, supported user of Gauri-delivered platform (SAP, Salesforce, Data & AI solution)

Standard: Ensures nothing falls through cracks between delivery team and support team

Duration: Typically occurs in 30-60 days from go-live (varies by engagement size)

KICK-OFF PHASE (Within 5 Working Days of Contract Signature)

Timeline: Schedule kick-off call within 5 working days of contract signature

Participants: Customer Success contact, delivery lead, support team representative, client key stakeholders

Call Agenda:

- Confirm key stakeholders and their roles
- Identify primary support contacts (business and technical)
- Document escalation preferences and procedures
- Capture client-specific systems, terminology, business processes
- Agree on communication channels and response expectations

Documentation: Call notes documented and shared with all parties

DELIVERY-TO-SUPPORT HANDOVER

Timing: Before go-live, delivery team completes formal handover to support

Handover Documentation:

- System Architecture Overview: How platforms are configured and integrated
- Known Issues and Workarounds: Any identified limitations or workarounds
- Custom Configuration: Client-specific customisation outside standard features
- Expected Support Queries: Top expected support queries based on engagement
- Access Credentials: Secure transfer of system access credentials for support team
- Escalation Paths: Identification of which issues require engineering escalation

HYPERCARE PHASE (First 30 Days Post Go-Live)

Support Level: Lighter-touch "hypercare" support during first month

Faster Response: Faster response time targets than standard support

Dedicated Contact: Named point of contact for client consistency

Scope: Support team available for go-live issues, training reinforcement, adoption questions

Transition Planning: Plan transition from hypercare to standard support tiers at 30-day mark

ONGOING RELATIONSHIP REVIEWS

30-Day Review: Customer Success check-in at 30 days post go-live

Review Topics: Adoption metrics, outstanding issues, additional training needs, user feedback

90-Day Review: Follow-up check-in to assess steady-state support needs

180-Day Review: Full business review with client leadership

Account Planning: Reviews feed into account strategy and upsell opportunities

Continuous Feedback: Regular feedback loops inform support and delivery improvements

SUPPORT ESCALATION MATRIX

PRIORITY DEFINITIONS

P1 (Critical): System down or data loss affecting business-critical operations for whole client organisation

- Examples: ERP system offline preventing orders, data corruption, security breach
- Impact: Complete business disruption, revenue impact, compliance risk

P2 (High): Major function unavailable or significantly degraded for group of users

- Examples: Salesforce reporting unavailable, inventory management slow, integration failing
- Impact: Significant workflow interruption but workarounds exist

P3 (Medium): Feature not working as expected with workaround available

- Examples: Report not formatting correctly, email integration delayed, minor data inconsistency
- Impact: User frustration but work can continue

P4 (Low): Cosmetic issues, minor questions, enhancement requests

- Examples: Typo in field label, general how-to questions, feature request
- Impact: No business impact, can be addressed in regular maintenance

RESPONSE TARGETS

P1 Response: Acknowledged within 15 minutes, 24/7 coverage

- Continuous updates every 30 minutes until resolved
- Escalation to engineering and management immediately
- 24/7 on-call team responding

P2 Response: Acknowledged within 1 hour during business hours (8am-6pm UK time)

- Business hours support (Monday-Friday, excluding UK public holidays)
- Standard support tiers apply

P3 Response: Acknowledged within 4 business hours

- Standard business hours response
- Non-urgent prioritisation

P4 Response: Acknowledged within 1 business day

- Pooled queue processed in order
- Longer resolution timeframe acceptable

ESCALATION PATH

Tier 1 Support: Initial triage, known-issue resolution, basic troubleshooting

- Support desk analysts
- Ticketing system management
- Known issue database
- User training and basic configuration questions

Unresolved → Tier 2: Escalation to platform specialists within priority's response target

- SAP specialists (Business One, S/4HANA)
- Salesforce specialists (Sales Cloud, Service Cloud, Field Service)
- Data & AI specialists (analytics, lakehouse, Setu-AI)

Tier 2 Unresolved → Engineering: Escalation to relevant engineering team lead if unresolved within twice the initial response target

- Product engineering team
- Architecture team
- Integration team

Executive Escalation: Any P1 incident or formal client service quality concern

- Automatic flag to Customer Success lead
- P1 incidents flagged to COO (Chief Operating Officer)
- Regardless of whether technical issue resolved

POST-INCIDENT REVIEW

Timing: Every P1 and P2 incident receives written review within 5 business days

Review Content:

- Root Cause: What caused the issue and why it wasn't prevented
- Resolution: How issue was resolved and timeline to resolution
- Preventative Actions: What changes prevent recurrence
- Lessons Learned: Systemic improvements needed
- Client Sharing: Appropriate sharing of findings with affected client

SUPPORT CHANNELS AND AVAILABILITY

SUPPORT TICKET SYSTEMS

Web Portal: Gauri Support Portal for ticket submission and tracking

Email: Client-specific support email addresses for email-based ticketing

Phone: Support phone line (01522 243122) for P1 incidents requiring immediate attention

Channels: All channels create tracked ticket with same priority and response targets

Real-Time Updates: All ticket updates visible in real time in Support Portal

Email Notifications: Automatic email notifications on status changes (no need to call for status update)

SUPPORT HOURS

Standard Hours: 8:00am-6:00pm UK time, Monday-Friday, excluding UK public holidays

24/7 Support: Clients with 24/7 support agreement (typically P1-critical systems) have out-of-hours coverage as defined in contract

Holiday Coverage: On-call team available during UK public holidays for P1 incidents

Response Timing: Response time targets apply across all working hours and time zones (accounting for UK business hours)

KNOWLEDGE RESOURCES

Support Portal: Knowledge base articles for common issues and questions

Documentation: Platform-specific documentation (SAP, Salesforce, analytics)

Training Materials: Video tutorials and job aids for key processes

Webinars: Regular training webinars for new features and best practices

Community: User community forums for peer-to-peer support

SUPPORT FAQ

HOW DO I RAISE A SUPPORT TICKET?

Clients can raise tickets through three channels:

1. Gauri Support Portal (web-based): Self-service ticket creation and status tracking
2. Email: Send to client-specific support address
3. Phone: Call Support line (01522 243122) for P1 issues

All channels create a tracked ticket with same priority and response targets defined in Escalation Matrix.

WHAT ARE GAURI'S SUPPORT HOURS?

Standard support available 8:00am-6:00pm UK time, Monday-Friday, excluding UK public holidays.

Clients with a 24/7 support agreement (typically for P1-critical systems) have out-of-hours coverage as defined in their contract.

HOW DO I REQUEST A CHANGE, NOT JUST A FIX?

Change Requests: New fields, new reports, configuration changes logged separately from support tickets

Routing: Change requests go through Customer Success team for scoping

Quotation: Chargeable changes go through formal quotation process rather than being actioned directly by support desk

Differentiation: Support desk fixes urgent issues; Customer Success team manages planned enhancements

WHO CAN RAISE TICKETS ON OUR ACCOUNT?

Authorised Contacts: Each client nominates authorised contacts during onboarding who can raise and approve tickets

Verification: Requests from unrecognised contacts verified before any account or data change

Security: Protection against social engineering by verification of ticket requestor identity

Contact Management: Authorised contact list maintained in Support Portal

HOW DO I CHECK THE STATUS OF AN EXISTING TICKET?

Real-Time Visibility: All ticket updates visible in real time in Support Portal

Automatic Notifications: Email notifications sent automatically on status changes

No Phone Call Needed: No need to call in for status update unless ticket has had no update within priority's target window

Ticket Search: Support Portal enables search and filtering of existing tickets

TROUBLESHOOTING GUIDE

GENERAL DIAGNOSTIC APPROACH

Before Escalating: Confirm three key diagnostic questions:

1. Can the issue be reproduced? (Consistently or intermittently?)
2. Is it affecting one user or many? (Individual vs. systemic issue)
3. Did anything change recently? (Deployment, configuration, permissions)

Answering these three questions resolves or correctly routes the majority of tickets without needing engineering involvement.

SALESFORCE-SPECIFIC ISSUES

Access Issues: Check user permission sets and profile assignments first for "access denied" or "object not visible" errors

Data Sync Problems: For data sync issues with SAP integrations, check integration log for failed jobs before assuming Salesforce-side fault

Browser Cache: Browser cache and cookie issues account for disproportionate share of "the page won't load" or "field data is stale" reports

Clear Browser Cache: Advise user to clear browser cache and cookies, restart browser

Lightning Experience: Verify user is on Lightning Experience, not legacy Salesforce Classic

Network Issues: Check network connectivity and firewall rules for firewall-related issues

SAP-SPECIFIC ISSUES

Error Code Capture: For SAP Business One or S/4HANA errors, capture exact error code and transaction context

Error Research: SAP error codes are specific and usually point directly to root cause (authorisation, master data, or configuration) once looked up

Common Issues: Authorisation issues (user lacking roles), master data issues (supplier or product not set up), configuration issues (field mandatory but empty)

Transaction Context: Note which transaction triggered error (e.g., "error when posting purchase order" vs. "error when viewing report")

Support Tier 2: Escalate to SAP specialists for error code interpretation if not found in standard SAP documentation

DATA AND REPORTING ISSUES

Numbers Don't Match: When client reports "the numbers don't match," first confirm which report and which time period

Metric Definition: Check whether semantic model definition for metric matches what client expects

Definition Mismatch: Many "data bugs" are actually definition mismatches (different calculation logic) rather than pipeline errors

Data Quality: Check for known data quality issues or recent data loads that might affect results

Drill-Down: Provide detailed drill-down showing data flow from source system through transformation to final report

WHEN TO ESCALATE TO ENGINEERING

Multiple Users Affected: Issue affecting multiple users rather than single user (indicates systemic vs. user configuration issue)

Data Loss or Corruption: Potential data loss or corruption requires immediate engineering investigation

Reproducible but Undiagnosed: Issue that can be consistently reproduced but cannot be diagnosed within first response time target

System Performance: Degraded system performance, timeouts, or system slowness affecting user productivity

Integration Failures: Integration between SAP/Salesforce/data platform consistently failing

Custom Code Issues: Issues related to custom code or customisation delivered as part of engagement

SUPPORT METRICS AND MONITORING

TICKET METRICS

Response Time: Percentage of tickets acknowledged within target response time (goal: 95%+)

Resolution Time: Average time from ticket creation to resolution by priority level

First Contact Resolution: Percentage of tickets resolved by Tier 1 without escalation (goal: 60-70%)

Reopen Rate: Percentage of resolved tickets reopened by client (goal: <5%)

SATISFACTION METRICS

Customer Satisfaction (CSAT): Post-resolution survey asking client satisfaction (goal: 4.5+/5)

Net Promoter Score (NPS): Likelihood to recommend Gauri to peer organisations (goal: 50+)

Effort Score: Ease of getting support resolved (goal: 4+/5)

Response Quality: Accuracy and completeness of support responses

TREND ANALYSIS

Issue Patterns: Regular analysis of ticket trends identifying recurring issues

Root Cause Focus: Addressing root causes rather than symptoms to reduce ticket volume

Process Improvement: Support metrics feed into continuous improvement of processes

Escalation Metrics: Tracking escalation rates and times to optimise support team structure

PREDICTIVE MONITORING

Proactive Monitoring: Monitoring client systems for health indicators before issues occur

Error Rate Monitoring: Tracking error rates in integrations, reports, and transactions

Performance Monitoring: Tracking system performance metrics (response time, throughput)

Early Warning: Alert on anomalies suggesting imminent issues

Preventive Outreach: Contacting clients when early warning signs detected to prevent issues

VENDOR MANAGEMENT FOR CLIENT SYSTEMS

THIRD-PARTY INTEGRATIONS

Third-Party Dependencies: Many Gauri engagements depend on third-party tools (Talend, Slim4, ThoughtSpot, etc.)

Vendor Support: Working with vendor support teams for issues outside Gauri's scope

Interface Support: Gauri responsible for interfaces between platforms, vendors responsible for platform internals

Escalation Procedures: Clear escalation procedures for identifying whether issue is Gauri, vendor, or client infrastructure

CLIENT ENVIRONMENT SUPPORT

Infrastructure Responsibility: Client responsible for infrastructure (cloud, networking, firewalls, security)

Access Issues: Network firewalls, VPN, and connectivity issues addressed by client IT

Credential Management: Client manages credentials for development, staging, and production environments

Change Management: Client change management processes followed when modifying environments
